

Act report

Welcome to Mahdy Blog, today i'll talk about dogs, yes that's is a strange little bit, but it's amazing too.

Firstly: I wanna say that our data came from the source, the real source, we in Udacity team asked **WeRateDogs** Twitter Account to help us to make our statistics, they was helpful i wanna thank them just right now ;) they gave us thier twitter account archive then we modified it and did some statistics, before that we ran every image in the **WeRateDogs** Twitter archive through a **neural network** that can classify breeds of dogs, then we made some statistics on it.

we wanted to know:

What the most neural network predictions of dogs breeds that more than or equale 75% confidence?

as we can see from the chart that **Golden Retriever** is the most.

Second we wanted to know:

What breed of dog with highst favourite count and breed of dog with hieghst retweet count?

using some statistics tools we found that **Labrador Retriever** breed got the most favourite count with **132810 favourites**, then we found that **Labrador Retriever** breed again got the most retweets count with **79515 retweets**, people loves Labrador Retriever I think.

Third we wanted to know:

Whats common stages for top rated dogs?

again using some statistics tools we found that **pupper** stage is top rated with highest standard deviation too, then we found that **floofer** stage is in second position with lowest standard deviation, **floofer** was tha perfect one.

see ya again ;)
